

Arunkumar Nethikunta

Hyderabad, Telangana — +91 7032328381 — arun773352@gmail.com — LinkedIn — GitHub

Education

Malla Reddy Engineering College and Management Sciences

Dec 2021 – May 2025

Bachelor of Technology in Computer Science Engineering

Technical Skills

Languages: Python, Java, JavaScript, SQL, HTML, CSS

Frameworks: Django, REST APIs

Databases: MySQL, Oracle SQL, MongoDB

Tools & Platforms: Git, GitHub, Linux, AWS Basics

Core Concepts: Data Structures, GenAI, Object-Oriented Programming, DBMS, AI/ML

Others: Prompt engineering, Data visualization, Data analysis, SDLC, Application Integration

Experience

Technical Intern

Aug 2025 – Nov 2025

CDA IT Solutions India Private Ltd

- Developed backend components for web applications using Python, Django, and MySQL.
- Designed secure authentication workflows including login, registration, and user validation.
- Created database models and implemented CRUD operations using Django ORM.
- Integrated frontend templates with backend services to deliver dynamic web pages.
- Identified and resolved software defects through testing and debugging activities.
- Worked in Linux environments and used Git for version control and collaboration.

Projects

Credential Verification Platform using Blockchain

Python, Django, Web3.py, Ethereum, HTML, CSS, Js

- Developed a full-stack credential verification platform using Django and Ethereum blockchain.
- Integrated Web3.py to securely store and validate certificate hashes on the blockchain.
- Implemented authentication, certificate upload, and verification workflows.
- Enhanced data integrity through cryptographic hashing and tamper-proof verification mechanisms.

Intelligent Document Processing and Retrieval System

Python, FAISS, Gemini API, Sentence transformers, vector db, huggingFace

- Built a Retrieval-Augmented Generation system using Gemini API and FAISS vector database.
- Developed document ingestion, chunking, embedding generation, and indexing pipelines.
- Implemented semantic search to retrieve relevant context for user queries.
- Improved response quality by grounding LLM outputs using retrieved document knowledge.

Structural Damage Classification System

Python, pandas, Numpy, OpenCV, Scikit-Learn, Seaborn, matplotlib

- Developed machine learning models for structural damage detection using image datasets.
- Applied preprocessing, feature engineering, and dataset balancing techniques.
- Implemented Random Forest and Support Vector Machine algorithms for classification.
- Evaluated model performance using accuracy metrics and visualization techniques.

Certifications

- Web Development Certification – WAYSPIRE
- Python Programming Certification – Cisco
- Generative AI Certification – Google
- Full Stack Development Certification – Coursera
- Basics of UI/UX – Future Skills Prime
